The Winner in the All America Vegetable Selections for 1946

Bush Bean

35 LONGGREEN*

The Only New Vegetable Which Received an Award In the 1946 Selections

LONGGREEN is an outstanding new Bush Bean which begins to bear in about 56 days after planting and continues to provide heavy picking for some time to come if planted in good rich soil. It combines choicest quality, delightful flavor, rich green color, tender flesh, and complete absence of strings or fiber at all times. The round pods are fleshy, straight, and measure 7 inches in length so that it is an inch longer than the variety Tendergreen which it resembles in most other respects.

LONGGREEN is as attractive as it is delicious while the great length of the pods is clearly reflected in the high yield. It is a splendid variety for the home garden, for market, and for canning if broken up.

May we suggest that you order early because we expect a very strong demand. Pkt. 15c; ½ lb. 40c; lb. 75c; 2 lbs. $1.40; 5 lbs. $3.15 postpaid.

Three Outstanding All America Winners of 1945

26 Bush Bean, Improved Commodore *

65 days. Beautiful, long, straight, round pods which are tender and of excellent flavor, borne abundantly on plants 16 inches tall. Always entirely stringless and free from fiber. It replaces Commodore, introduced in 1938, which had to be withdrawn because splitting of the seed prevented the production of viable seeds for planting. Pkt. 15c; ½ lb. 35c; lb. 60c; 2 lbs. $1.15; 5 lbs. $2.25, postpaid.

108 Bush Lima Bean, Fordhook 242 *

75 days. Wherever the crop of the regular Fordhook Bush is adversely affected by hot summer weather this new Fordhook 242 is the variety to be chosen. It resembles Fordhook with its large, thick-seeded pods which contain 3 or 4 nutty-flavored beans each but the plants have more foliage than regular Fordhook and will set pods in abundance during hot, dry summer weather. The early yield also exceeds that of Fordhook. Pkt. 15c; ½ lb. 35c; lb. 65c; 2 lbs. $1.25; 5 lbs. $3.00, postpaid.

106 Bush Lima Bean, Early Market *

68 days. A beautiful large, flat-seeded variety which is bound to replace Burpee Bush because of its earlier maturity and the attractive green color of the beans when ready for table use. The pods are smooth, quite straight, of a dark green color and average over 4 inches in length; with 3 or 4 attractive beans of choicest flavor. Valuable for the home garden and for market. Pkt. 15c; ½ lb. 35c; lb. 65c; 2 lbs. $1.25; 5 lbs. $3.00 prepaid.

Culture—For the first crop sow seeds of the earliest sorts under glass or in the house about the middle of February. When they are 4 inches tall transplant them into flats or a spent hotbed to stand 4 inches apart each way. Give plenty of air on sunny days to harden properly. For the main crop, sow seeds of the second-early and main crop varieties in a hotbed or warm cold-frame by April 1st. Plant outdoors, 3 feet apart each way, about the end of May. One ounce of seed will produce about 2500 plants. The maturity dates given for Tomatoes represent days from setting the plants outdoors. Allow an additional 6 to 7 weeks for plant production.

It's Easy To Plan Your Garden By Following
The Symbols Used Throughout This Book

The symbols shown below with explanations will help you much to plan your garden. They stand out from the text and therefore make it easy to pick out the kinds suited to specific conditions.

@ = Annual. Annual flowers complete their life circle within one growing season. They must be sown every year.
® = Biennial. These require two years to bloom. Seed sown during one season will produce flowering plants the second year. Occasionally they live longer than two years.
[HPE] = Half-Hardy Perennial. These cannot stand much frost but may be kept alive by bringing indoors, placing in the cold frame, or covering securely during the winter.
[HP] = Hardy Perennial. These last for several years, withstanding considerable frost provided the soil is well drained.
[T] = Tender Perennial. Tender perennials may be kept growing throughout the year in the house or greenhouse. Many of them are showy bedding plants for a summer and fall display.
§ = Climbing Plants. Climbing and trailing plants which are best grown with a support on which they can climb.

△ = Suited to Rock Garden. Most plants suited to rock gardens are also desirable for dwarf beds and borders. The smaller the rock garden the smaller the plants should be.
○ = Suited to Semi-Shade. Most plants suited to semishade also do well in a sunny exposure. Semi-shade means some sun for part of the day or a location where the plants receive ample indirect light from above.
★ = Suited to Shade. Few plants do in dense shade but those marked in this way will be found quite satisfactory. There are no annuals which will bloom in deep shade.

☆ Seeds marked with a ★ often are sown in late fall outdoors to germinate the following spring. Spring germination is quickest if they are placed in water and set in the freezing chamber of an electric refrigerator. To secure the beneficial effect of alternate freezing and thawing, thaw them out once a week and then freeze again. They will be ready for sowing after two to three weeks of this treatment.
